Le indirizziamo la presente notifica poiché, secondo la documentazione in nostro possesso, Lei ha o potrebbe aver ricevuto un sottogruppo di impianti altamente levigati che sono stati confezionati in una busta in polietilene a bassa densità (low density polyethylene, LDPE) potenzialmente in grado di aderire agli impianti.

Questa è una notifica di follow-up all'avviso di correzione dell'agosto 2013. All'epoca, in seguito a un'indagine accurata sulle cause del problema, Zimmer Biomet ha deciso di sostituire la busta in LDPE impiegata per il confezionamento degli impianti altamente levigati. Le prove condotte hanno dimostrato che la nuova busta risolve il problema e impedisce che la stessa aderisca agli impianti. Ciononostante, Zimmer Biomet ha continuato a ricevere dei reclami che evidenziano l'adesione delle vecchie buste in LDPE contenenti i dispositivi alla superficie altamente levigata dell'impianto. Questo fenomeno si verifica con una frequenza di circa 1 caso su 12.800. Di conseguenza, Zimmer Biomet ha deciso di richiamare tutti i prodotti interessati tuttora in circolazione.

Zimmer Biomet ha condotto un'esauritiva valutazione dei potenziali rischi associati a questo tipo di fenomeno ed è giunta alla conclusione che è improbabile che l'adesione della busta in LDPE possa causare eventi avversi a carico del paziente o compromettere il funzionamento dell'impianto. Le conclusioni si sono basate sulle seguenti considerazioni:

- Il materiale LDPE è biocompatibile, simile al polietilene ad altissimo peso molecolare (ultra high molecular weight polyethylene, UHMWPE).
- L'LDPE è più morbido dei due materiali accoppiati del UHMWPE e della lega di cromo-cobalto-molibdeno (cobalt chrome molybdenum, CoCrMo). Pertanto, non si prevede che possa scalfire o provocare usura superficiale, fenomeni che potrebbero aumentare i tassi di usura ed eventualmente causare osteolisi.
- Qualora vi fossero particelle di usura generate dalla pellicola/dai residui adesi della busta in LDPE, si presume che queste potrebbero produrre reazioni biologiche simili a quelle causate dal UHMWPE ed è inverosimile che possano aumentare la probabilità di osteolisi periprotetica.

Di seguito sono riportate le immagini esemplificative degli impianti soggetti ad adesione della busta in LDPE.
